5: Sensitive & big data exception Form

1. Project name: Decision support system (DSS) using RTC-Tools 2

2. Lead researcher: Klaas-Jan van Heeringen (project), Jorn Baayen (RTC-Tools 2)

3. Data steward UvA EB/ASE-RI/ABS-RI: Bas Bouten

For the above-mentioned project, UvA EB will ensure that the data is stored safely and in accordance with the law (especially the *Algemene Verordening Persoonsgegevens*), the UvA guidelines and the EB RDM protocol outside Figshare at:

☐ a local storage within UvA EB and that the data steward of UvA EB is the only person able to access the data.
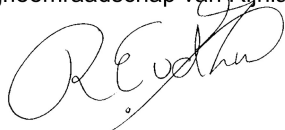

☒ a storage facility elsewhere (information on location and access are known to the Data Steward). Location: Hoogheemraadschap van Rijnland

The storage is done outside Figshare for the following reasons:
This operational DSS produces additional data every 15 minutes. It is not realistic to archive all of this data, given the large volumes (~1TB over its lifetime so far). We expect the system to remain operational for 5-10 more years.
